SIDELOADER ADVANTAGE: FASTER & SAFER

We have incorporated more drive into our services with Sideloaders for easier and efficient material handling. The first stage involves the grounding of your container. This is done with a Sideloader which is a trailer fitted with cranes at both ends. This arrangement allows for loading and unloading 20' or 40' containers to or from the ground. The actual time taken by the Sideloader to load or offload the container is only a few minutes and it eliminates the lengthy time and effort needed to co-ordinate between the trailer driver and the crane operator to get the job done. The main advantage of using this system is that the whole procedure is carried out at ground level where it is both faster and safer. This also reduces the potential for accidents to workers and damage to goods.

- Packing and unpacking the containers is done safely on the ground
- Stuffing and de-stuffing at site saves expensive port charges and the need for double handling
- Exporters can consolidate their cargo directly in the container saving time and warehouse space

Our services for grounding of 20' and 40' containers are available from Jebel Ali Port, Port Rashid and Sharjah Port/SICD and we deliver the containers to various locations like Sharjah Industrial Area, Al Gussais, Al Aweer, Al Rashidiya, Al Quoz, Jebel Ali Free Zone, Jebel Ali Industrial Area, Ajman etc.

HALA AT A GLANCE

HALA

THE HALA ADVANTAGE

HALA Used Heavy Equipment Trading Establishment was established in 1988 for supplying quality used forklifts of brands like Toyota, TCM, Mitsubishi, Nissan & Komatsu from Japan. Our well-equipped service centre along with trained and experienced technicians gives us an advantage over others.

Our associate office in Japan helps us locate good quality, low-hour forklifts at a competitive price. We usually have very large stocks of forklifts ready for sale, at our yard.

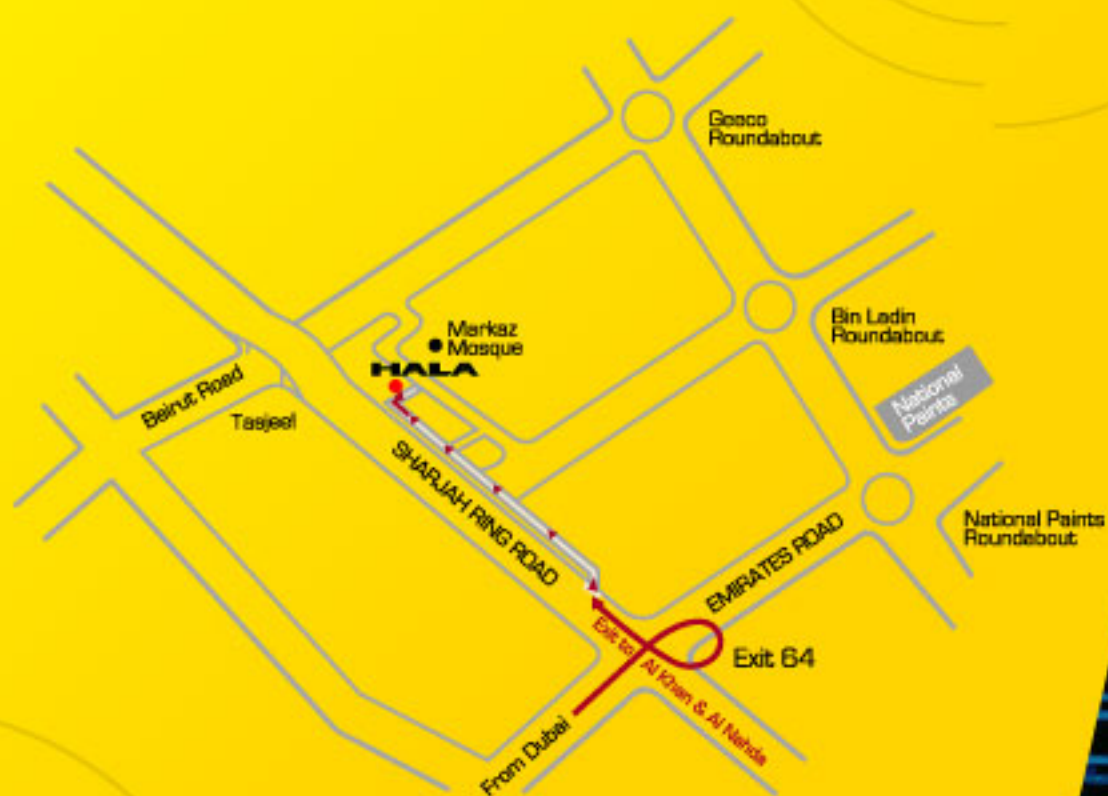

HELI: A CLOSER LOOK

Heli is the world's 10th largest forklift manufacturer* and has appointed us as its sole distributor in the UAE. Reliable, powerful and affordable, Heli forklifts are equipped with Japanese Isuzu C240/BBG1 diesel engines and the gear box and transmission are manufactured under Japanese collaboration. Ergonomic German designed seats also make them comfortable to drive. Over the last five years, we have tested and sold these forklifts in the UAE's rigorous rental market and their performance has been excellent across all parameters. Using Heli forklifts also makes perfect business sense for your company as the cost of acquisition is low, maintenance costs are low and they are very good performers. Internationally, Heli also exports forklifts to North America, Europe, Australia, Middle East, South America and South East Asia.

- ISO9001 & European 'CE' certification for product quality & safety assurance
- 190 Training & Service Centers throughout the world
- National level Forklift Research & Development Centre in China
- Large manufacturing base (approximate annual turnover US\$ 681 Million - 2006)
- Heli exports its "V" casting & forgings, including engine transmission parts for forklifts to other well known brands like TCM & Toyota and other companies in Europe, Korea and Japan
- Diesel forklifts are fitted with Isuzu C240 PKJ / 4JG2 / BBG1 engines manufactured in Japan. (Local availability of parts at reasonable price)
- Electric forklifts are fitted with Mosfet Curtis/Zapi electronic controller from USA/Italy (Local availability of parts & service)
- Battery and chargers used in Electric Forklifts are from the UK (Local availability of parts & service)
- Side-Shift Carriages and other Attachment Carriages are manufactured by reputed manufacturers from Europe and America
- Competitive price
- Built for safety and comfort with a wide view mast, good suspension, comfortable seat and convenient, ergonomically located controls.
